

Data

# Knowledge is power.

Join over 35,000 doctors and nurses maximizing the power of data through **GNOSIS™**

Imagine an education platform that *generates data* to **measure competency**, that *applies data* to **maximize learning**, and that *analyzes data* to **manage risk**.

In one comprehensive education and analytics platform, GNOSIS brings the **power of data** to healthcare quality and patient safety through personalized learning.

With data from GNOSIS, hospital leaders can *streamline* education strategies, *optimize* resource allocation, and ultimately, *reduce* risk. Clinicians can *target* their learning, *master* their skills, and ultimately, *improve* patient care.

Join us as we *redefine* healthcare education and help clinicians *achieve* their full potential.

## Assessment.

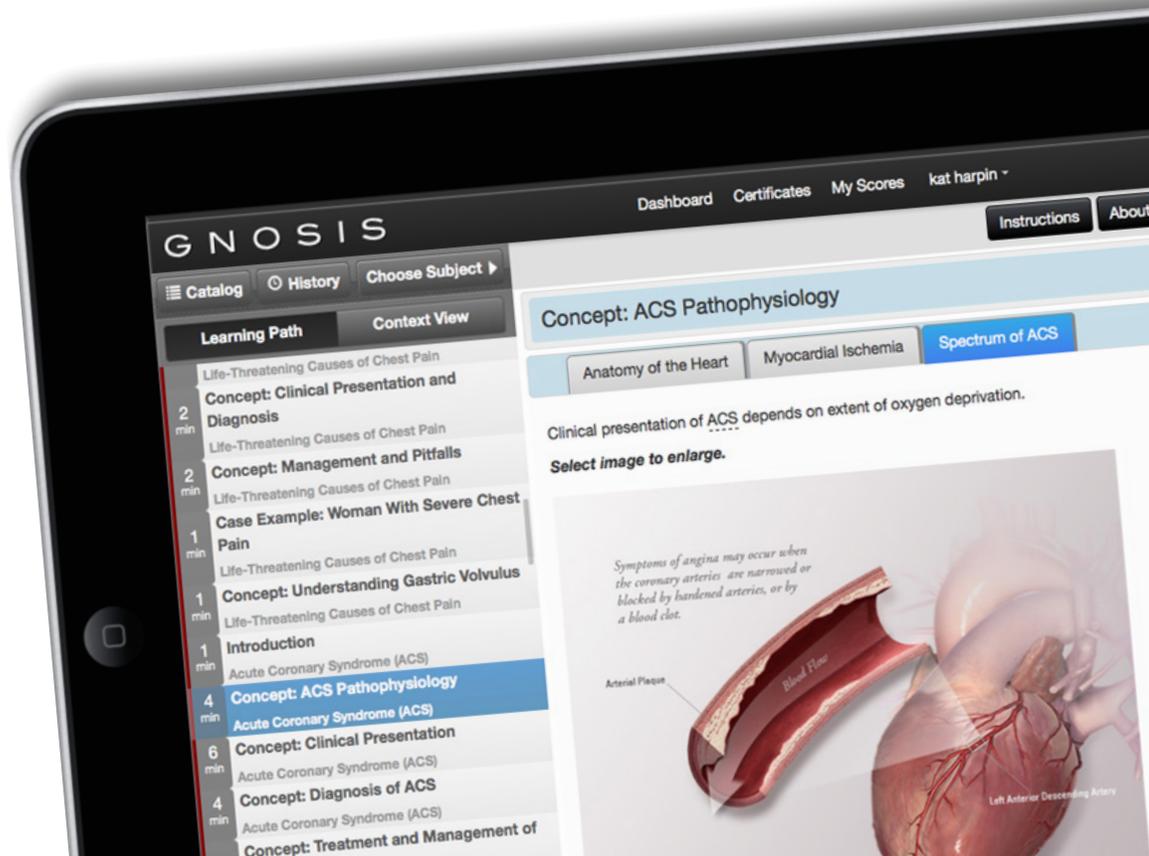

The first-of-its-kind **web-based measurement tool** that uses data to assess clinical knowledge and judgment.

## Achievement.

The first-of-its-kind **personalized learning path** that uses data to help clinicians achieve their highest potential.

## Advancement.

The first-of-its-kind **analytics and comparison tool** that uses data to identify risk and advance clinical mastery.

# 300+

U.S. hospitals have implemented GNOSIS to identify and mitigate risk

# 4,000+

GNOSIS assessments and learning paths are completed each month

# 35,000+

doctors and nurses to date have used GNOSIS to improve patient care

### GNOSIS for Obstetrics

- Fetal Assessment & Monitoring
- Shoulder Dystocia
- Obstetrical Hemorrhage

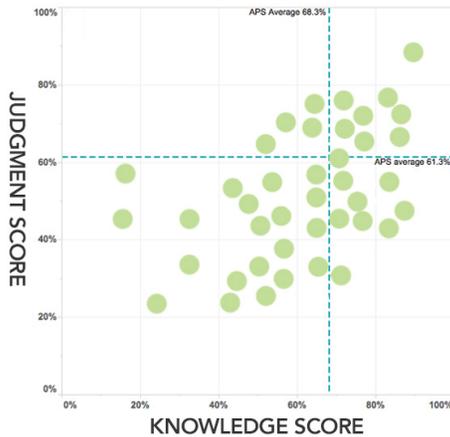

### GNOSIS for Emergency Medicine

- Chest Pain
- Acute Abdominal Pain
- Communication in the ED

“The breadth and depth of this tool is unparalleled in the industry.”

Jenny Henriques,  
Risk Management Program Specialist,  
Women & Infants Hospital of Rhode Island

## 1 Assess individual and team clinical competencies.

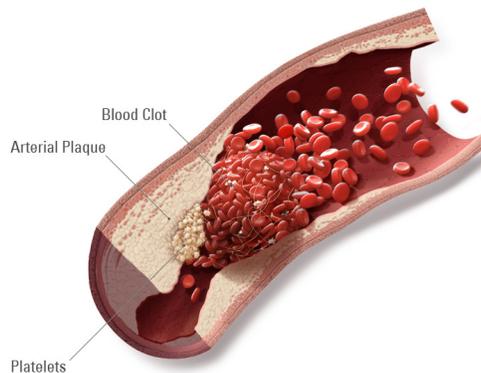

Through APS's proprietary methodology, GNOSIS provides statistically-sound insight into clinicians' mastery of knowledge and judgment in high risk areas of patient care.

- evaluation of evidence-based proficiency
- quantification of clinical critical thinking
- benchmark of individual scores
- transparency into team performance

“The proficiency assessment is uniquely designed. The fact that judgment questions have no exact answer is true to every day clinical life and this helps us measure areas of risk above and beyond medical facts. The assessment has illuminated opportunities for us to focus our improvement efforts and that is really valuable.”

Frank Middleton, MD,  
Senior Vice President, Physician Practices,  
Phoebe Putney Health System and  
Risk Management Consultant, Georgia

## 2 Achieve actionable results with personalized learning.

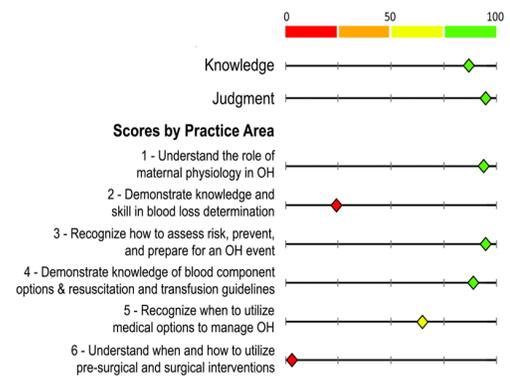

Based on individual assessments, GNOSIS delivers a personalized, high-quality curriculum developed by medical experts and designed for efficiency and effectiveness.

- learning prioritized by areas of need
- topics presented in 2-8 minute segments
- content delivered 24/7 online, mobile
- accreditation for CME/CE

“The content is very thorough and up-to-date, and I can complete it how I want and when I want since there is no set “class” time. Our days are already so stretched it is great to be able to do this when I can. I really like the flexibility and like knowing that I am getting rigorous training that keeps me current every year.”

Renee Davis, RN, RNC,  
Central Valley Network,  
Adventist Health System, California

## 3 Advance the clinical team's mastery in areas of risk.

Using real-time analytics, GNOSIS equips hospital leaders and risk managers with data to pro-actively identify and invest in areas that will improve quality and patient safety.

- costs reduced by streamlining training
- decisions supported by actionable data
- risks addressed through training programs
- outcomes improved with targeted learning

“There are so many aspects of GNOSIS that make it a great match for our needs. Not only are we confident that it is up-to-date and based on peer-reviewed literature and the most current best practices, but we are also excited about the assessment feature, which ensures that we are targeting learning areas where we need support most.”

Shannon Hilmer, RNC, BSN, MSN,  
Director of Women's Services,  
Lakeland Regional Medical Center, Florida
