

RELIAS OB

Reduce variation with data-driven education.

“The Relias OB Obstetrical Hemorrhage course is the single most powerful education tool MacDonaldd Women’s Hospital has ever used.”

Nancy J. Cossler, MD
Chief, System Quality for Obstetrics
University Hospital, Relias OB client

In one comprehensive education and analytics solution, Relias OB (formerly GNOSIS) brings the power of data to healthcare quality and patient safety through personalized learning.

Impact on clinicians:

- reduce seat time
- increase engagement
- build high reliability

Impact on leadership:

- streamline education strategies
- optimize resource allocation
- reduce team variation

Impact on mothers and babies:

- increase patient safety
- reduce risk exposure
- improve outcomes

Join us as we redefine healthcare education and help health systems build the best patient care teams.

Fetal Assessment and Monitoring

A tracing-centered approach to teach advanced concepts of fetal assessment and monitoring. Topics include anatomy and physiology, pattern identification, NICHD nomenclature, FHR components, patterns, interventions, and pattern management.

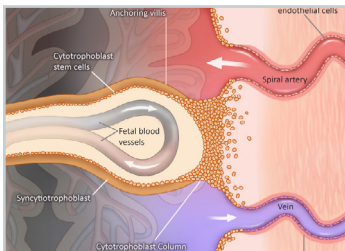

Shoulder Dystocia

A team-based model optimized for high-risk environments where collaboration is imperative. Content covers how to manage various aspects of shoulder dystocia with illustrations and explanations of the maneuvers used to resolve this obstetric emergency.

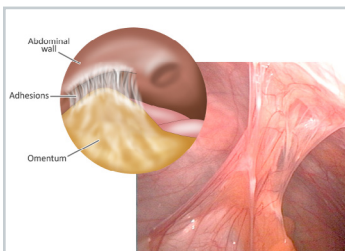

Obstetrical Hemorrhage

An overview of tools, guidelines, and approaches for managing obstetrical hemorrhage. Content covers how to recognize abnormal bleeding, quantify blood loss and identify common risk factors, plus how to understand early interventions.

Hypertensive Disorders in Pregnancy

A comprehensive update of 2013 CMQCC and ACOG evidence-based guidelines around the diagnosis and management of hypertensive disorders in pregnancy. Content covers classification and nomenclature, diagnostic criteria, and management guidelines.

Promoting Vaginal Birth

Examines the rise in cesarean birth rate with associated patient, medical, and financial impacts. Clinical strategies to promote safe vaginal birth are presented including promotion of physiologic labor, selective use of labor induction, contemporary labor and FHR tracing management, appropriate use of vaginal birth after cesarean (VBAC), and management of fetal malpresentation.
