

RELIAS CLINICAL SOLUTIONS:  
RELIAS OB and  
RELIAS ED

Reduce variation with  
data-driven education.

*“The breadth and depth of this tool is unparalleled in the industry.”*

Jenny Henriques  
Risk Management Program Specialist,  
Women & Infants Hospital of Rhode Island

In one comprehensive education and analytics solution, Relias (formerly GNOSIS) brings the power of data to healthcare quality and patient safety through personalized learning.

With data from Relias, hospital leaders can streamline education strategies, optimize resource allocation, and identify risk. Clinicians can target their learning, master their skills, and improve patient care.

The proven results are:

- **increased proficiency**
- **reduced risk**
- **improved outcomes**

Join us as we redefine healthcare education and help health systems build the best patient care teams.

**800+**

U.S. hospitals impacted

**65,000+**

participating clinicians

“The specialized training is able to identify, prioritize, and tailor key competencies for individual staff’s continuing education.”

Barbara Pelletreau, Senior Vice President, Patient Safety, Dignity Health

## 1 Assess Proficiency

Relias Clinical Solutions is a web-based measurement tool that uses data to assess knowledge and judgment.

- evaluation of evidence-based proficiency
- quantification of critical thinking skills
- benchmark individual scores
- transparency into team performance

## 2 Measure Learning

Relias Clinical Solutions delivers a personalized learning path that uses data to measure the impact of individual learning.

- learning prioritized by need in 2–8 minute segments
- content delivered online 24/7 with saved progress
- differentiated learning: video, text, illustration, cases
- accreditation for CME/CE

## 3 Identify Risk

Relias Clinical Solutions provides analytics tools and uses data to identify risk by specific clinical practice area.

- costs reduced by targeting training
- decisions supported by actionable data
- risks addressed through training programs
- outcomes improved with targeted learning

### Scores by Practice Area

## Obstetrics

According to ACOG, **42% of obstetricians have experienced a liability claim**, many of which can be attributed to issues in proficiency and team communication. You can minimize the risk of claims with targeted and timely training, education, and analytics provided by Relias OB.

### Fetal Assessment and Monitoring

**A tracing-centered approach to teach advanced concepts of fetal assessment and monitoring.** Topics include anatomy and physiology, pattern identification, NICHD nomenclature, FHR components, patterns, interventions, and pattern management.

### Shoulder Dystocia

**A team-based model optimized for high-risk environments where collaboration is imperative.** Content covers how to manage various aspects of shoulder dystocia (SD) with illustrations and explanations of the maneuvers used to resolve this obstetric emergency.

### Obstetrical Hemorrhage

**An overview of tools, guidelines, and approaches for managing obstetrical hemorrhage.** Content covers how to recognize abnormal bleeding, quantify blood loss and identify common risk factors, plus how to understand early interventions.

### Hypertensive Disorders in Pregnancy

**A comprehensive update of 2013 CMQCC and ACOG evidence-based guidelines** around the diagnosis and management of hypertensive disorders in pregnancy.

### Promoting Vaginal Birth

**Examines the rise in cesarean birth rate with associated patient, medical, and financial impacts.** Clinical strategies to promote safe vaginal birth are presented including promotion of physiologic labor, selective use of labor induction, contemporary labor and FHR tracing management, appropriate use of vaginal birth after cesarean (VBAC), and management of fetal malpresentation.

## Emergency Department

There are **136 million emergency (ED) department visits each year**. The ED is a large source of malpractice claims as a result of failed or delayed diagnoses, improper assessment, and breakdown in communication. Relias ED addresses these areas of risk.

### High Risk Abdominal Pain in the ED

**A program on triage, evaluation, diagnosis, and management of undifferentiated abdominal pain.** Content includes gynecologic, vascular, and inflammatory surgical emergencies, as well as morbidity intestinal disorders.

### High Risk Chest Pain in the ED

**A thorough review of how to utilize the history, exam, diagnostic studies, and decision rules to evaluate patients with chest pain.** Content includes aortic dissection, pulmonary embolism, cardiac tamponade, esophageal rupture, gastric volvulus, and STEMI.

### Communication in the ED

**A collaborative approach to best practices for maximizing communication among clinicians in the emergency department.** Content includes optimal communications with families, discharges, handoffs, and transfers.

### Nurse Triage in the ED

**A comparative examination of the most common emergency department triage systems.** Content includes assessing patients using a 5-level system and triage for special populations.

### Pediatric Fever Without a Source

**An examination of principles behind evaluation and management of fever in pediatric patients.** Content includes immunology and physiology, epidemiology of febrile illness, and evidence-based guidelines.

### Sepsis for Emergency Nurses

**Designed for RNs to identify, treat, and defeat sepsis and reduce risk for hospital acquired infections.** Content includes 17 cases to help RNs refine assessment and treatment techniques to effectively manage complex health issues that often accompany sepsis.
